

changes to the fund statistics in international informer

We recognise that the fund statistics form an integral part of **international informer**. In an effort to continue developing and improving the fund information published in **international informer** we are introducing some changes detailed below in order to streamline and clarify the fund statistics content.

Royal Skandia and Skandia Ireland use a multi-currency pricing system which allows us to take the price of a fund and, by applying an exchange rate to it, produce equivalent, 'theoretical' prices in other currencies, as supported by our unit-linked product offering. Up until now, we have been listing the funds in their primary currency of denomination as well as the re-priced variants, which meant that at any one time **informer** contained more than a dozen data points on circa 1,900 funds. In order to simplify the information and improve clarity, we will from now on be publishing the performance of our funds in their original currency of denomination. Where multicurrency options are also available, these will be indicated by our internal fund codes, which will be published alongside the primary fund option.

Other changes include:

- revised categorisation of funds to improve navigation
- the introduction of a currency performance table, to help assess the impacts of currency movements on the performance
- the withdrawal of the Risk Evaluator: following the changes in the fund categories, we feel that the current version of the Risk Evaluator is no longer fit for purpose. However, we are working on developing a new tool, to replace the Risk Evaluator which would assist with the risk assessment of our funds. Please look out for further news on this in future editions of **international informer**.

§ Royal Skandia funds closed to new Personal Portfolio Bond business.

1 The funds show USD performance rather than the performance of the underlying currency of the Fund.

Investors should be aware that unit prices and the income from units may fall as well as rise and that past performance is not a guide to the future.

Where a fund invests in securities designated in a different currency to the fund or where an underlying fund is denominated in a different currency, investments may rise and fall purely as a result of exchange rate fluctuations.

Sector classifications are proprietary to Skandia International.

The performance figures shown are inclusive of all external fund management fees and Royal Skandia's Annual Management Charge; however, they exclude product charges.

The currency that features at the beginning of the Royal Skandia fund names indicates the currency that the funds are denominated in (the base currency). For example, the Royal Skandia £ Balanced Portfolio is denominated in *Sterling*.

Royal Skandia's Multi-currency pricing system allows Royal Skandia to take the price of a fund and, by applying an exchange rate to it, produce equivalent prices in other currencies. The fund codes shown under the heading 'additional re-priced currencies' indicate the availability of multi-currency priced funds.

Royal Skandia Portfolio Bond products must invest directly into the base currency funds.
